

146 to 220), Tree Swallow (from 5040 to 6218), Bank Swallow (from 2100 to 3010), American Pipit (from 53 to 203), Warbling Vireo (83 to 111), Blue-winged Warbler (54 to 67), Black-throated Blue Warbler (from 20 to 27), Hooded Warbler (from 24 to 32), Wilson's Warbler (46 to 59), Clay-colored Sparrow (from 10 to 26), and White-crowned Sparrow (1732 to 2222).

Where were the shorebirds? Why so few Semipalmated Plovers (67) and Upland Sandpipers (8)? Others seemed scarce as well.

In addition to the records above, single Brewster's Warblers (not in-

cluded in these Count totals) were reported from both Cook and Winnebago counties.

Now for TABLE 7. Details in this table identify how much time and effort were spent throughout the state to count the birds. Without this information the results could not be analyzed in a meaningful way. The columns in TABLE 7 identify 1) the county; 2) the AREA of the state (1, 2, 3 or 4) in which the county occurs; 3) the number of species reported; 4) the number of countable birds reported; 5) the number of birders in the county; 6) the number of birding parties in the county; 7) the beginning and ending

time (in the 24-hour system with owling hours before and/or after daylight hours marked by an asterisk); 8) the number of party miles walked (W) and driven (D); 9) the number of party hours walked (W) and driven (D); and 10) the county compiler.

As you peruse this report you'll notice the species order is the same as the new Checklists and Field Cards (vultures follow storks and herons, shrikes and vireos follow flycatchers, cardinals and buntings follow sparrows, etc.) I realize it's difficult to accept the new species order, but, we'll all get used to it eventually.
