Letter from the editor

There's still much we don't know about bird behavior

Several years ago on May 1, Renee Baade and I were driving home from a week-long trip birding Michigan's Upper Peninsula. Baade directed my attention to two immature Bald Eagles. We guessed they were third-year birds. But what most astonished us was that they seemed to be exhibiting adult courtship behavior. We thought the two eagles had actually locked talons, but neither of us knew that much about the behavior of immature Bald Eagles so we just enjoyed the show until they flew away.

Then six months ago Richard Bjorklund submitted an article for *Meadowlark* detailing his fascinating observations of subadult courtship in Bald Eagles, which you can read in this issue's Seasonal Highlights. While it was exciting to read an account that seemed to support what Baade and I had seen, it also made me realize how very little humans actually know about bird behavior. I also wonder how much bird behavior must occur right before our eyes, yet go unnoticed.

For instance, H. David Bohlen, one of the state's most respected birders, observed an interesting phenomenon regarding American Coot migration for the first time last winter. Bohlen watched these nocturnal migrants take flight at dusk one by one. His fascinating report is also in Seasonal Highlights.

Most recently, Donald Dann, an IOS member, sent me a note describing Herring and Ring-billed Gulls "hovering and picking caterpillars and other large insects off the tops of trees" on his Lake Michigan shoreline property. Dann asked, "Is this as uncommon as I think?" Tom Schulenberg at the Field Museum of Natural History in Chicago said the behavior is not only uncommon, but he also had never heard of it before. While gulls do indeed eat insects - California Gulls for instance eat crickets - the idea of a gull acting in fly-catcher-like fashion was news to Schulenberg who remarked it was too bad Dann didn't have a video recording of the observation.

So it seems there are not just rare finds and first state records to document in Illinois, but unusual bird behavior as well. This winter while you're missing the 100 species you saw in one day during migration, why not record bird behavior? You might learn something new about a common species and perhaps even contribute to science in the process.

MEADOWLARK

A Journal of Illinois Birds

Volume 4, Number 3 - 1995

ISSN 1065-2043

President's Message

A quick perusal of our journal highlights the talents of our visual artists and writers. Issue after issue contains stunning drawings and photos plus well-researched articles. We are grateful for the hard work and volunteer spirit of our illustrators, photographers, writers, and editors. But we can not rely on them alone to continue providing us with quality work. Many of them have been working for the journal since it was first published four years ago.

Meadowlark is your journal, and as such, we invite you to get involved with helping produce it. Perhaps some of you are not confident about your abilities. Don't worry. Although we have set high standards for the journal, that doesn't mean we aren't interested in working with you. Perhaps we could have a photography field trip or a writing seminar at an annual meeting.

The first step, however, is to contact the art editor or the chief editor to learn how you can contribute to *Meadowlark*. You'll find their addresses on the inside back cover of the journal.

Eric Walters

About our cover:

David Athans drew our cover illustration of a Short-eared Owl.

Athans, a member of the Chicago Ornithological Society, has exhibited his drawings at the Midwest Birding Symposium and also sells his works through Wild Birds Unlimited.

He can be reached at 708.388.1285.

An Illinois Christmas Bird Count Odyssey Top to Bottom and Back

by David B. Johnson

David B. Johnson traveled the length and width of Illinois to participate in nine Christmas Bird Counts the winter of 1994/95. Here he is shown birding Union County in southern Illinois. Photo by Robert Chapel.

The following narrative is dedicated to Penny Pucelik who died 30 August 1994. My odyssey might never have happened had she not ignited the spirit of birding in me two decades ago. On 12 November 1972 I went on my first bird walk as a senior at Bradley University in Peoria. Pucelik, my French instructor, took me on a weekend get-away bird walk with her husband Tom at Chautauqua National Wildlife Refuge in Illinois. It was a delightful, crisp, fall day, resplendent with feathered wonders. We saw a Northern Shoveler and Snow Geese that appeared as if they had "mud slapped against the sides," as Pucelik put it. An American Kestrel perched on a wire and my first woodpecker, a downy, called as we walked the trails. I took almost the same walk on 23 December 1994, at the Chautauqua Christmas Bird Count, 23 years later. This was a special count for me, not only because of the Bald Eagles and thousands of waterfowl that clouded the skies, but also because it included many of the same birds I had seen with the Puceliks earlier. I was then reminded of the gift Penny Pucelik had given me so long ago.

As a northerner, I dreamed for years of participating in the southern Illinois Christmas Bird Counts (CBCs) where the possibility existed of recording 100 species or more in one count circle and where many more individuals as well as species are seen than where I usually

count in Lake County. Vernon Kleen of the Illinois Department of Natural Resources had been bugging me for years to join in one of the southern counts. I decided 1994 was going to be the year to do it. I was going to help with the Horseshoe Lake, the state's southernmost count, Cypress Creek, and then Union County CBCs in extreme southern Illinois.

With new binoculars and a desire to participate in as many Illinois CBCs as I could, I planned an itinerary that would take me from the Chicago area through central Illinois and back to northern Illinois during the two week Christmas count period (17 Dec 1994 - 2 Jan 1995). I arranged to join in Denis Kania's Fermilab-Batavia count in DuPage County; Myrna Deaton's count at Clinton Lake in DeWitt County; the BIG THREE, Horseshoe, Cypress Creek, and Union County in southern Illinois; the Evanston count; Joel Greenberg's Chicago lakefront and Waukegan counts; and, finally, I had learned that there was a Chautauqua NWR count in central Illinois that I could join on my way back from southern Illinois if Sig Bjorklund and Dave Bohlen agreed, which they did. I was excited about participating in this great birding year-end tradition - a social and scientific event. I was going to have fun top-to-bottom birding in Illinois and hopefully set a new record of nine CBCs in one year. What follows is a personal account of my 1994 CBC odyssey.

Fermilab-Batavia.

17 December, 9 a.m. I met my long time birding friend Joe Suchecki of Naperville at Pratt-Wayne Woods and Prairie Preserve. My first CBC bird was a Red-tailed Hawk, a lone sentinel on a snow-covered field. As I pulled up to meet Suchecki, he exclaimed he had already seen an exciting bird, a Lincoln's Sparrow along an open creek. This great find required a meticulously detailed description. We walked several open fields with diminishing snow cover finding several Eastern Meadowlarks and Swamp Sparrows as well as a Ring-necked Pheasant and watching Horned Larks flying overhead. At noon we heard a Snow Bunting. We also saw a single Yellow-rumped Warbler feeding on poison ivy berries before leaving to fly south.

The afternoon was spent drive-birding around the Du Page County Airport. This was pretty good "turf"; we discovered a Brown Thrasher

Meadowlark

along a shrubby creek and more Horned Larks on the airport grounds. Perhaps the best area was a wet weedy patch at the airport's southwest end where Joe Suchecki had seen a Short-eared Owl the week before. I pushed an immature White-crowned Sparrow and a Savannah Sparrow, which represented the second time that species had been recorded for this count.

Just as the winter light began to fade I thought I had spotted a bald-faced hornet nest. But wait! It was an owl, a Barred Owl which had just come out of a spruce in a small corner woodlot at the prairie's edge. Quite a few Du Page birders I met at Jim and Kate Frazier's countdown party thought this was a great find. I thought Kate's chili recipe was a great find, too! As always at these countdown parties, the best birds and high counts were announced, then immediately put on the Du Page County bird alert. I wondered how many people would go after the Savannah Sparrow versus the owl.

Clinton Lake.

18 December. 5:45 a.m. I had to make a choice. Drive straight down to Clinton Lake, about 180 miles away, or get a few hours sleep at home after the Fermilab countdown party. I chose four hours of sleep and woke at 2 a.m. to head to the Clinton Nuclear Plant Energy and Environmental Center east of Birbeck in DeWitt County. I arrived at 5:45 a.m., promptly went back to sleep, and awoke when the 6:30 a.m. arrivals drove into the parking lot. Myrna Deaton, the compiler for the Clinton Lake count, quickly gave out assignments and maps. Mike Donahue of Danville and I were to cover the north valley and branch of Clinton Lake. Since I liked to drive fields in search of longspurs and Horned Larks, we also got plenty of open fields, a habitat disappearing on the Chicago area counts.

Where we could, we transected the woodlands and valleys south of Solomon. Each time we performed hunt-and-peck birding, getting out

and sampling different habitats, often not walking more than 100 yards in each area, reconnoitering, and then driving on to the next spot. The chatter of the Carolina Wrens was a welcome addition to a northerner's CBC list of species. So was the Tufted Titmouse. The woodlands had flickers, Downy and Red-bellied Woodpeckers, and an occasional Red-headed Woodpecker. American Tree Sparrows were the most common field and roadside sparrow. We looked for more unusual sparrows but could only come up with seven Song Sparrows and later in the afternoon, Swamp Sparrows.

Donahue seemed apprehensive about driving so many open stark brown and black fields in search of longspurs. Our efforts soon paid off, however, when we spotted a flock of mixed blackbirds and starlings. After the flock arose and reeled to a field close by, two all-black birds with white eyes remained in a tree by the road's side. I noted the purplish hoods on each bird and exclaimed,

White-crowned Sparrows on a fence row were seen in mid-state during one of the nine Christmas Bird Count treks taken by David Johnson during the 1994/95 season. Drawing by Karen Becker.

"Those are male Brewer's Blackbirds in breeding plumage!" We studied these birds while they remained in a farmer's cow lot yard for at least 45 minutes. We recorded the greenish sheen to the black plumage, razor-straight culmen on the bill, and rather short, squared tail.

Just north of this farmer's woodlot, wisps of snow began swirling over the dark and stubble cornfields as many Horned Larks and several Lapland Longspurs called overhead. We had to wait at one point for a large group of cattle to cross the road. At noon we reconnoitered at the Visitor's Center where we learned of some rather good bird sightings by other parties including another male Brewer's Blackbird seen by Myrna Deaton, a Northern Saw-whet Owl recorded by Steve Bailey and company, Northern and Loggerhead Shrike, plus many water birds.

Since no Brown Creepers had yet been recorded, finding one became our afternoon mission. Off we went to the north valley where we found two creepers as well as a Sharp-shinned Hawk darting through a small river's edge, scattering all the birds. At the prairie point we pished five Swamp Sparrows along the lake's grassy wet eastern edge. Across the lake we spotted Green-winged Teal, Northern Shoveler, Gadwall, and Mallards. But the real thrill was hearing a Wild Turkey gobbling across the valley. At the evening's tally, each team had their own feathered trophies to contribute to the pot of 88 species. Counters also mused about whether hiking a few more miles would have produced the elusive Red-shouldered Hawk or the winter finches that were missing from the count.

Horseshoe Lake.

20 December. I picked up Myrna Deaton around noon 19 December to make a leisurely journey to Horseshoe Lake Conservation Area in Alexander County, seven miles north of Cairo. You know you're headed south when Turkey Vultures and an occasional Black Vulture are soaring

overhead and as Loggerhead Shrikes dot the telephone wires and barbed-wire fences along the way. Horseshoe Lake is the state's southernmost count and observers have almost always recorded 90 species or more, though falling short of the magic 100 mark. As Mike Donahue said, "It's one of those 98s," meaning this count had the dubious distinction of being one of the "BIG THREE" which have recorded 98 species but no more.

The 2,400-acre shallow lake provides a wintering ground for not only thousands of Canada Geese but also many other wintering birds. As we entered the refuge at sunset Monday, a gorgeous Bald Eagle, whistling Wood Ducks, and a cacophony of geese greeted us along the oxbow lake with a bayouesque backdrop of bald cypress, swamp cottonwood, and tupelo gum. The Miller City Blacktop soon brought us to the turnoff to the Illinois Department of Natural Resources' Wicker Club lodge. Now I was about 340 miles south from home and my count circle in northeastern Illinois. Mike Donahue rates the Wicker Club a "modest and rustic A" for its comfortable lodging and rather modern kitchen and bath facilities. I couldn't argue with his assessment.

The next day, Deaton and I set off on our assigned area, the refuge nature preserve loop around the lodge's campground and some driving routes south of the refuge along the Mississippi River. The morning brought "tea-kettle, tea-kettles" of Carolina Wrens and the "old Sam Peabody" songs of White-throated Sparrows, plus Eastern Bluebirds and Fox Sparrows. In the wood and field edges south of the Wicker Club were scores of Song and Swamp Sparrows, lesser numbers of Field and Savannah Sparrows, and a solitary Lincoln's Sparrow spotted by Deaton. Rufous-sided Towhees, Brown Thrashers, Ruby-crowned Kinglets, and one House Wren darted about in the hedges. In the wetter, flat fields, we saw Killdeer almost everywhere as well as an occasional Common Snipe. Lapland Longspurs and

Horned Larks often called above. The air was balmy and crisp and while the deciduous trees were bare, we felt as if it were the Spring Bird Count, not the CBC.

In the afternoon we spotted 11 species of ducks, including Canvasback and Northern Pintail in the Grand Lake area, and in the evening we observed several cormorants and Ring-billed Gulls at a new levee retention area near Willard. The Wicker Club countdown party brought the usual "oohs and ahs" as Vernon Kleen and H. David Bohlen recorded the first Ross' Goose, two immature female Indigo Buntings out on Horseshoe Lake Island in some fallow milo fields, and two Common Yellowthroats.

Cypress Creek.

21 December. During the evening a spring-like thunderstorm dropped in and when we awoke at 4:30 a.m. to drive to the Cypress Creek NWR center at Shawnee Community College, we wondered if the rain would quit. It did. Myrna Deaton and I got our assignments from Todd Fink and Judy DeNeal and headed out the Belknap Blacktop to check on a Black Vulture roost. There were no Black Vultures on the high power lines but a Rough-legged Hawk sailed over the Indian Point Bluff in Johnson County. (I felt at home in Johnson County.) We enjoyed a soaring Turkey Vulture and Northern Harrier. After recording several Yellow-rumped Warblers eating poison ivy berries near Karnak we explored some southern fields which brought a pocket of 15 Savannah Sparrows, easily 15 times as many as I've ever seen on a northern Illinois count, and a group of about 10 singing White-crowned Sparrows on a brushy fence row. We recorded 106 of this species that day. Most were singing. Late evening brought us into Karnak where we observed the count's only Hooded Mergansers in a pond adjacent to a dike levee.

This count's countdown party was held at Shawnee Community College. Scott Robinson and his friend

Meadowlark

crew recorded a high number of Red-headed Woodpeckers along the Cache River bottoms, which contributed to a state record of 738 Red-headed Woodpeckers on a CBC. Other woodpeckers such as the Hairy Woodpecker and Northern Flicker were recorded in record numbers, 109 and 291, respectively. Todd Fink turned up an Orange-crowned Warbler at Wildcat Cemetery in a pine grove. He also produced out of his pocket a plastic bag with a fresh specimen of a Northern Parula (Illinois State Museum specimen 660401), a neotropical migrant that should have long been gone, but instead failed to migrate and died.

Steve Olsen recorded good numbers of Le Conte's Sparrows (23). A state record number of Northern Harriers and Short-eared Owls were seen, 73 and 19, respectively. Cypress Creek recorded 98 species and nine new all-time state high counts. A PBS news crew even visited and videotaped the party. This was the second official year of this count and it's already a member of the 98 club. It's one to watch in the future.

Union County.

22 December. My assignment was a 7-mile walk with Robert Chapel from the top of Hamburg Hill in Shawnee National Forest down to Lyerle Lake. At twilight after the drive up from the Wicker Club lodge, Chapel and I heard a Barred Owl call from the distant hills. We left my car at Lyerle Lake and proceeded to the top of Hamburg Hill near the summer camp where Scott Robinson does his neotropical migrant research. By the time we reached the top of the hill there was plenty of sunlight to begin our descent and count. The quiet stillness of the winter woods was punctuated by a Pileated Woodpecker and a pair of nuthatches. Many of the beech trees retained their light brownish leaves and as we began our walk down Hamburg Hill, a trickle of water drew in our first kinglets, Carolina Chickadees, and Winter and Carolina Wrens. One Purple Finch stopped briefly on a sycamore and by the time we reached

the bottoms below, birds were popping up all over. Numerous Hairy, Downy, Red-bellied, and Pileated Woodpeckers called at every listening stop we made. Tufted Titmice, Brown Creepers, and kinglets were bountiful. As we walked along the water's edge at the foothills junction with the swamp we found Wood Duck and many Gadwall. Cries of Red-shouldered Hawks also pierced the swampland. Occasionally I found a cane break and said to Chapel, "Maybe this could hold Swainson's Warbler in the summer."

We left the swamp at about 11 a.m. in time for the annual "pit bull walk by", so named because to get to the next spot we had to walk by 15 chained and growling pit bulls. We quickly left those howling confines to the sounds of more Carolina Wrens, White-throated Sparrows, and cardinals. A mockingbird flew up along a fence row and by the time we reached Lyerle Lake many House Finches were tallied.

At the top of the dike, Bohlen spotted an immature male Surf Scoter, a first for the Union County count. Most all the count participants saw this rarity. The afternoon was spent out on the levee roads which offered commanding views of the Mississippi River valley and its birds. We counted abundant sparrows in the fallow bottomlands adjacent to the river. Longspurs and Horned Larks were often out in the stark bottomlands. As evening approached we tallied a Loggerhead Shrike on a weed stalk and several Eastern Bluebirds flying up to a forest edge. Soon we were at Trail of Tears refuge headquarters where hot chicken soup was waiting and once again the count-down festivities began.

That evening's best bird had to be Bohlen's sighting of an immature Chipping Sparrow. Bohlen also recorded an immature Golden Eagle earlier in the day flying over the refuge, a bird I'd hoped to see in southern Illinois while on the counts but missed. The Mississippi River fallow bottomlands fields (left over from the great flood of 1993) hosted new state

record high counts of Song and Swamp Sparrows, 894 and 654, respectively. Union County also recorded a new state high for Eastern Bluebirds, 199 individuals.

The drive back to Decatur was tough after three straight days of bird counting. Myrna Deaton drove back to her home in Decatur and I made it back to Clinton and crashed only to be awakened at midnight since I had a piece of Deaton's luggage in my trunk. I also recovered my boom box which I had left at the motel on the 17th.

The next day was the Chautauqua Count. I told Bohlen I would try to meet him at the refuge headquarters at 6 a.m., if I could get up!

Chautauqua NWR.

23 December 1994. At 5 a.m. I managed to drive to the east side of Lake Chautauqua, just south of Goofey Ridge where I met Sig Bjorklund, Dennis Oehmke, and Bohlen at a turn-around north of the refuge headquarters.

This was some count! As soon as daylight began, clouds of Mallards (200,000) blackened the sky at the south end of the refuge. Many pintail and Gadwall were about, as well as an occasional Green-winged Teal. Bald Eagles coursed the shoreline and an occasional Northern Harrier flew by. A rather large group of swans was seen along the southern shore but the birds were too far away for positive identification.

At the southern end of the refuge, we saw many Common Mergansers as well as a dozen or more Bald Eagles. The swans had moved back north and were again too distant for identification. We then did some car birding through Havana getting some rather close views of Eurasian Tree Sparrows in shrubby backyards along with the regular House Sparrows. I enjoyed looking at these "ETS's" (as Bjorklund and Bohlen called them) at the northern limit of their range.

Around noon we decided to split up and drive to some open field country along the Mason Tazewell

ditch near Topeka. Bjorklund and I spent some time tallying a few harriers and kestrels but mostly we added sparrows and juncos along the ditch. The best birds of the afternoon were found in the Mason tree farm when I spotted two Cedar Waxwings near one of the service buildings. We also discovered 21 pheasants and a Cooper's Hawk.

The best find came when Bohlen and Oehmke discovered a Chipping Sparrow in with some juncos along one of the juniper windbreaks at the nursery. When evening came we finally made it back to the refuge headquarters and identified the swans which were better pinpointed by the refuge personnel during our afternoon forays. There were 13 Tundra Swans as well as five Trumpeter Swans all with green and yellow collar-bands signifying they had come from Wisconsin's re-introduction program. As daylight faded we recorded two Greater White-fronted Geese off one of the refuge dikes which we had not seen earlier but had been reported several days before and up to the count day.

Our team recorded 69 species and 255,584 individuals for the day. I left the team behind and headed for Chicago. At least three more counts to go!

Chicago Lakefront.

25 December. Christmas Day is usually spent under the tree with Santa and the kids. Not this year! The Chicago Lakefront Count which is almost always held on Christmas Day - after all it is a Christmas Bird Count - was one I had never before experienced. The Chicago lakefront's monolithic skyline as a backdrop for birding was as good of a change for the normal Christmas Day as I could get.

I will always remember the Christmas Day Surprise (Stokie 1992) when the state's first CBC Ivory Gull appeared on this count at Montrose Harbor. I was out of state visiting relatives and missed the bird. Who knows? I thought. Maybe I'll find a rarity like the Ivory Gull.

The mission assigned by compiler Joel Greenberg was to be at Meigs Field at dawn to look for Snowy Owls. Since none had been reported and it was not a Snowy Owl flight year, I was doubtful about any success. Nevertheless, I stood my vigil scanning the runways seeing only a goldeneye or Herring Gull offshore. The most interesting find was a drake Hooded Merganser off the 12th Street beach and an American Robin (my first in seven counts) along the parkway to the Planetarium from Meigs Airport. Sixteen American Coots were off the Shedd Aquarium breakwater along with Common and Red-breasted Mergansers.

Soon I met Greenberg and Margot Milde. We headed to Navy Pier and Olive Park where we added an unusual Ruddy Duck out in the harbor off the Chicago Metropolitan Water District Plant. Greater Scaup and an occasional Lesser Scaup were also seen. With lakefront areas covered, I headed home to my parents for an early evening Christmas Dinner.

Evanston North Shore.

26 December 1994. 5 a.m. This is my *alma mater* count. I have been compiler for this count for 15 years since 1980 (with one year off) and have diligently computerized all of the data since 1962. I usually field some 50 plus observers and coordinate some 20-30 feeder observers. Owling has always been a tradition on this count, so when Bill Moskoff, Drew Cromwell, Scott Hickman, Debi Stolarik, John Csoka, and I met in Lake Forest near Fort Sheridan, Lake County, I was delighted to have little or no wind or traffic noise. This was a perfect situation for owls. We immediately counted two dueting Great Horned Owls without playing tape recordings. Soon we were treated to many wonderful views of Eastern Screech Owls.

As day broke along Lake Michigan, many Common Goldeneyes and Red-breasted Mergansers could be counted as well as an occasional Bufflehead. The birds we were looking for and are often quite distant

from shore were Oldsquaws with their white heads and dark sides. My telescope picked up a raft of these birds about one-half mile out. We counted 110 Oldsquaws there, and later, at the north end of Highwood, we recorded 60 more.

We thoroughly searched the lake again off Forest Park Ave. where we recorded a bizarre hybrid Hooded Merganser X Common Goldeneye, 3,000 Greater Scaup with several Lesser Scaup mixed in, two Hooded Mergansers, and two Surf Scoters.

Landbirding the ravines in Lake Forest failed to turn up either a single Winter or Carolina Wren, no Pine Siskin, and not much else save a Red-bellied or Red-headed Woodpecker or two and an occasional White-breasted Nuthatch. My territory had never been as quiet! We did manage to shake out a few American Tree Sparrows at the east end of the old Fort Sheridan airport runway. Toward evening an accipiter shot in front of our car. An adult Sharp-shinned Hawk landed on the roof of an abandoned building momentarily for us to see quite well.

I'm biased because I always like the Evanston North Shore's CBC parties. Birds are counted from the most to least usual amid a big spread of at least two birds (turkeys), plus a dessert table that could clog your arteries for life. This year's grandest bird was the Pileated Woodpecker found at Ryerson Conservation Area by Rick Siebert and Alan Stokie along the Des Plaines River. New to the count was Laurence Binford's immature Trumpeter Swan. It had no collar band, but was still not countable. Several count highs of waterbirds were established including a state high of 2,815 Greater Scaup and a tied high of five Surf Scoters.

Waukegan.

1 January 1995. By the time the Waukegan Count rolls around I'm either buried in snow or it's just too cold to be birding. Neither was the case this year. While it was windy, there was no snow and Third Lake, the deepest in Lake County, was to-

Meadowlark

tally open. The previous year we had 12,000 Canada Geese on this lake. This year our team's party of Mike Kutska of River Forest, Josh Engel of Evanston, and my two sons Evan and Daren counted a mere 6,500 geese, but the five Snow Geese were a nice addition. Other birds on the lake included an adult Trumpeter Swan (no collar), 14 Mute Swans, eight Canvasbacks, two Ring-necked Ducks, and a Great Blue Heron. When we weren't staring through the telescopes at waterbirds we chummed for gulls using our secret weapon, Wonder Bread. We often got Ring-billed and Herring Gulls quite close to shore, but no white-wingers were to be had this day.

Driving around our territory, I found an old abandoned, stark, unharvested brussels sprout field with a dirt construction black dirt mound and no birds in sight, until two Horned Larks suddenly double-noted overhead and landed in the bleakest place on earth. With wisps of snow ruffling their plumage they occasionally sang before disappearing over the dirt mound.

I always walk a pine plantation in Gurnee hoping to find a rare owl or two and occasionally coming away with rarities such as an adult Goshawk or Sharp-shinned Hawk. This year's unusual birds in this track included a Great-horned Owl and a Northern Flicker. And just outside the grove I spotted a shrike low in the shrubby field east of the pines. We identified it as a Northern Shrike by the ghostly white crown and back and long, hooked bill plus a broken, bubbled-up eye in the middle of a narrow, black eye-line and light lower mandible. This was clearly a Northern Shrike invasion year.

The Waukegan countdown party is similar to Evanston North Shore's starting with the most to least common species. There were some good ones such as the Western Grebe at Waukegan Harbor (a state-

first CBC record), the loitering Nashville Warbler in a ravine at Great Lakes Naval Training Center, and seven Thayer's Gulls (tied for state CBC all-time high count) along the lakefront. Our lonely two Horned Larks were the only ones for the count. There were several other Northern Shrike reports.

This species was my last bird of the nine-count CBC season, bringing my total to 105 species (not including

Trumpeter Swan) and an estimated 500,000 individual birds. I had driven some 1,500 miles, hiked 20 miles, owled four hours, and hardly slept.

Would I ever stop counting? I guessed nine CBCs in one season was enough. Will anyone try 10 this year?

Buffalo Grove, IL 60089*

The Illinois 1994 Christmas Bird Count

by David B. Johnson and Alan F. Stokie

Mild weather during the fall of 1994 in Illinois also prevailed during the 1994 Christmas Bird Count (CBC) period. Only 39 percent of the northern counts had any snow cover. Fifty-four percent of the counts had totally open water while the remaining had only partially frozen water. The mean low temperature was 27.5 F, the mean high 39.5 F (see table 1), 4 degrees higher than the 1993 CBC season. These weather conditions provided for excellent concentrations of lingering waterfowl and sparrows. Observers set 33 new all-time high counts for species in Illinois.

Fifty-nine count tallies were

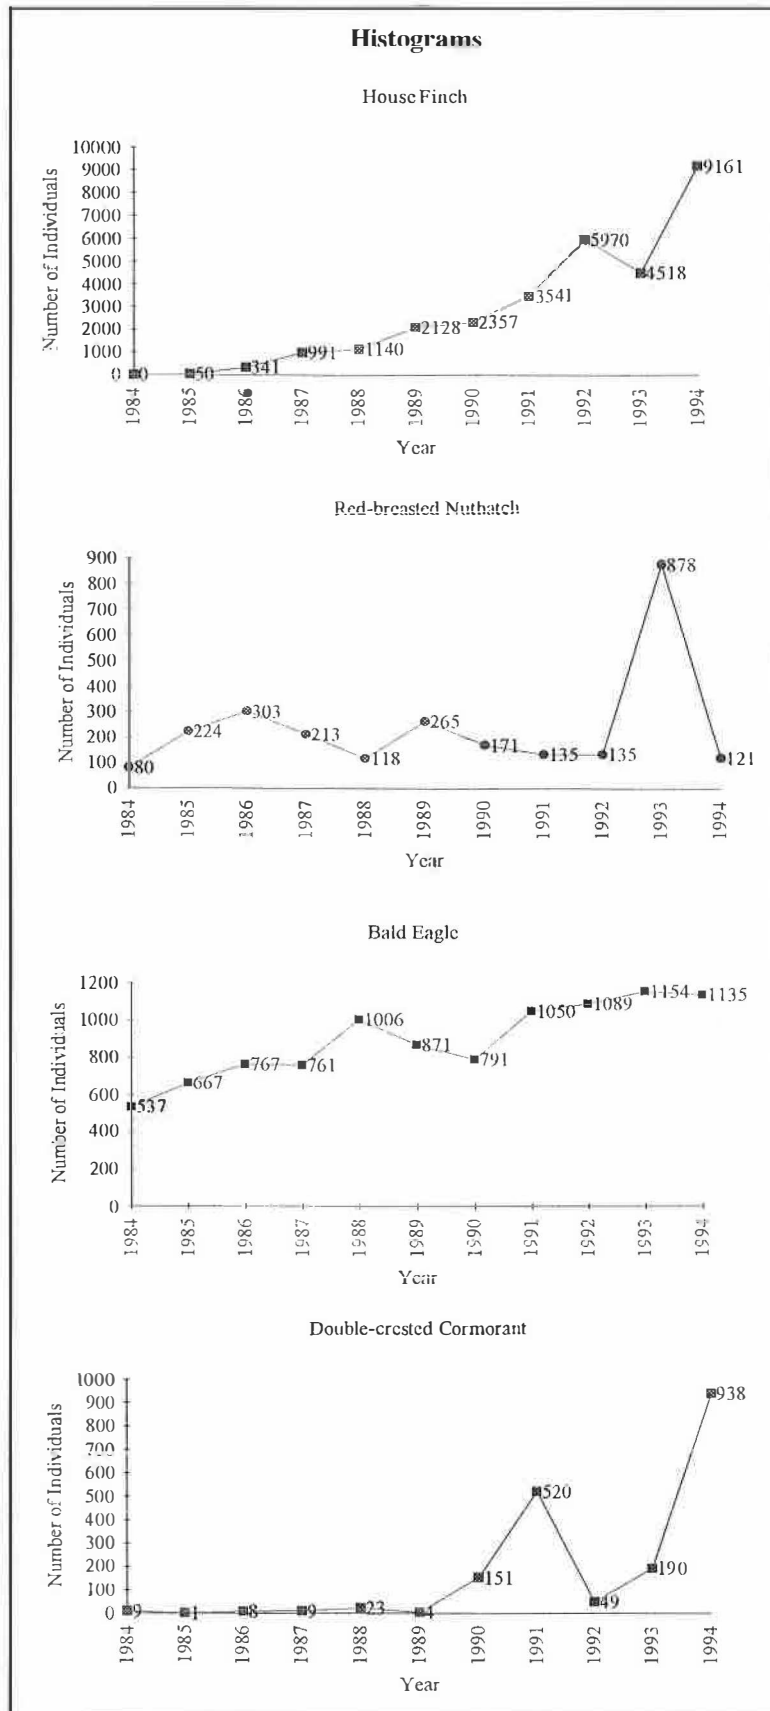

submitted representing 155 species. Rend Lake recorded 102 species, making it three consecutive years with more than 100. Four other counts recorded 90 species or higher. Cypress Creek had 98, as well as the highest number of individuals (1,083,908) and the highest number of new all-time high counts (9). Union County recorded 92 species; Horseshoe Lake and Crab Orchard National Wildlife Refuge each recorded 90.

The stellar find, and new to the state's Christmas count species list, was the near adult male **King Eider** recorded at Heidecke Lake, Grundy County on the Morris-Wilmington Count. Also new to the state CBC list were Waukegan's **Western Grebe** and Rend Lake's **Greater Yellow-**

The sub-adult male King Eider, above, photographed 27 Jan. 1995 was initially found 2 Jan. 1995 on the Morris-Wilmington Christmas Bird Count at Heidecke Lake, Grundy County. This represents the first Illinois CBC record. Photo by Joe B. Milosevich.

legs (3) and Lesser Yellowlegs (3). While not a state first (fifth record), a well-described **Red-throated Loon**, was seen on the Middle Fork River Valley Count and a well described **Common Moorhen** was recorded again (second consecutive year) at Calumet City-Sand Ridge, Chicago. Other unusual birds seen included 2 American White Pelicans at Quincy; 3 Great Egrets photographed at Joliet; solitary Ross' Geese at Rend Lake, Cypress Creek, and Horseshoe Lake; 5 Surf Scoters in central and southern Illinois which might signal a change in this species' status possibly due to the zebra mussel explosion; a Golden Eagle at Savannah and Union County; 1 Virginia Rail at Joliet; 1 Sora at W. Mercer; single Northern Saw-whet Owls at Middlefork, Forest Glen, and Clinton Lake; a solitary Fish Crow at Cypress Creek; single American Pipits at Champaign (present for some time), Cypress Creek, and Horseshoe Lake; 1 Orange-crowned Warbler at Cypress Creek; 1 Nashville Warbler at Waukegan; Brewer's Blackbirds in central Illinois (Clinton Lake, Muscatine, IA); and 2 immature Indigo Buntings at Horseshoe Lake. Two well-described Chipping Sparrows were recorded at Union and Chautauqua. A lingering Le Conte's Sparrow was at Decatur in central Illinois and a lone Harris' Sparrow was recorded at W. Mercer. Count week birds included a **Mew Gull** at Evanston North Shore and a dead **Northern Parula**, now an Illinois State Museum specimen, from Cypress Creek. Recorded on the count but seen in a different state were 7 exotic Chukars (Iowa).

Also unusual were the all-time high state counts for many species. Rend Lake counted a record 10 Common Loons, **864** Double-crested Cormorants (see histogram); and 16 Least Sandpipers; 44 migrating Tundra Swans were recorded on the Morton Arboretum (Lisle) count; 6 Trumpeter Swans (reintroduced) were at Clinton Lake; and 143 Mute Swans were at Calumet City-Sand Ridge. A record 62 Greater White-fronted Geese and 289 Northern Shovelers were recorded at Cypress Creek. Chautauqua had 1,071 Gadwall, 2,815 Greater Scaup and 5 Surf

These Great Egrets were tallied 26 Dec. 1994 at Joliet's Christmas Bird Count, Channahon, Will County. They represent the first record for this count. Photo by Joe B. Milosevich.

This Northern Mockingbird was tallied 2 Jan. 1995 on the Morris-Wilmington Christmas Bird Count in Braidwood, Will County. Photo by Joe B. Milosevich.

Scoters were Evanston's contribution to the state's record highs. Calumet-Sand Ridge recorded 107 Bufflehead. McHenry's 70 Sandhill Cranes set a new state record. Waukegan, once again, tied the Thayer's Gull count (7) by two birders literally throwing massive amounts (70+) of loaves of Wonder Bread into Lake Michigan. This non-stop chumming for one hour brought in not only the Thayer's Gulls, but also Bonaparte's and Glaucous Gulls. Schapville submitted a record Red-tailed Hawk count (184). American Kestrel (111), Northern Harrier (73), and Short-eared Owl (19) numbers were spectacular on the Cypress Creek Count. In addition, Cypress Creek's excellent bottomland forest provided

Adult Glaucous Gull (left) tallied 2 Jan. 1995 on the Morris-Wilmington, Grundy County, Christmas Bird Count. Photo by Joe B. Milosevich.

habitat for record numbers of woodpeckers: 738 Red-headed Woodpeckers, 109 Hairy Woodpeckers, and 291 Northern Flickers. Good numbers of Carolina Wrens (254) were at Cypress Creek. Kishwaukee recorded a state high of 95 Brown Creepers. Mild weather likely contributed to Union County's record Eastern Bluebird count of 199 individuals. Crab Orchard recorded a record 5 Pine Warblers and Rend Lake even added one.

Many observers statewide commented on the unusual numbers of lingering sparrows. The fallow levee bottomlands along the Mississippi River provided excellent wintering habitat for many sparrows. Union County recorded 894 Song Sparrows and 654 Swamp Sparrows, both new state high counts from the leveelands. Cypress Creek recorded 23 Le Conte's Sparrows, a respectable total although not a state high count. Finally, House Finch (see histogram) numbers continue to explode with a new state high of 708 individuals recorded at Union County.

An adult Peregrine Falcon was tallied 26 Dec. 1994 at St. Raymond's Cathedral in Joliet, Will County on a Christmas Bird Count. This is the first record for the Joliet count. Photo by Joe B. Milosevich.

In the avian exotica department a state record 27 Monk Parakeets were at Chicago's lakefront.

The best irruptive species was the Northern Shrike; 31 individuals were recorded in 17 count circles and many compilers reported all-time high counts for this species. In contrast, irruptive winter finches were almost nil. Pine Siskins were

Field Sparrow documented 2. Jan. 1995 in Goose Lake Prairie State Park on the Morris-Wilmington Illinois Christmas Bird Count. Photo by Joe B. Milosevich.

sparse with only 61 individuals (in 14 count circles) recorded for the entire state. Rockford and Van Patten recorded the only Evening Grosbeaks (4) plus 6 Red Crossbills were recorded on 2 counts.

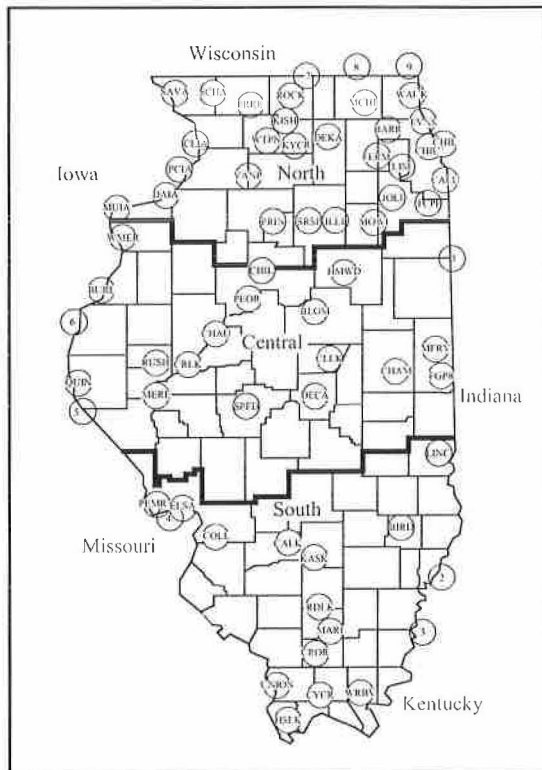

Many compilers submitted analyses of their counts. All compilers commented on the excellent waterfowl counts. In addition, several counts had the swoop of the swans or the swan hat-trick (3 species).

American Coots lingered longer this year. Richard Bjorklund's (Chautauqua) report of more immature Bald Eagles (41 versus 37 adults) indicates this species has had continued reproductive success (see histogram). Raptors were reported in strong numbers this year. Turkey Vultures lingered longer at Van Patten with 3 well-described birds reported there. Rend Lake's Sandhill Crane certainly was unusual for southern Illinois. Denis Kania (Fermilab) mentioned that gulls "are really exploding." Ring-billed Gulls, indeed, seem to be recorded in high numbers. Charles Wescott (Barrington) noted the continued expansion of the Red-bellied Woodpecker as a record high number was reported on that count (as well as Evanston [North Shore]) All compilers lamented the almost non-existent Red-breasted Nuthatches after last year's record numbers (see histogram). Additional compiler comments included the absence of berry-eating species such as Cedar Waxwings and American Robins. Evanston, however, had 1,763 American Robins due to an excellent buckthorn crop.

Due to the mild weather, unusual birds such as Savannah Sparrow and Lincoln's Sparrow were recorded in the northern circles with greater frequency and many compilers commented on the record

number of sparrows.

Nearly 12 percent of the party hours of this year's counts was spent feeder watching. What bias or effect

this has on the species that visit feeders and those found in the field is an interesting issue. In a recent article, Dunn (1995) suggested there is a potential problem if the analysis of Christmas Count data are used to validate population trends for species which visit feeders often, particularly in more southern latitudes. Dunn suggested that compilers should record birds seen by feeder-watchers separately from those reported by field participants. We strongly urge all Illinois CBC compilers to record data in this manner, even though there is no organized form to accomplish these data collections. In any event, the relatively low feeder watching effort in our state may inflate certain species totals in just a moderate level, an effort, however, which cannot be ignored.

Acknowledgments

Thanks to Vernon Kleen and H. David Bohlen who provided valuable comments on this report. Also, we welcome the new southern Illinois count, Warbluff Valley Wildlife Sanctuary this year. Burlington, Iowa reported its count to this publication, since a portion of its circle encompasses Illinois. Returning this year was the Savannah Army Depot count in northwestern Illinois and the Marion count in southern Illinois. Finally, congratulations to Fermilab-Batavia for fielding the highest number of observers in the state (82) and Peter C. Petersen of Davenport, Iowa who completed his 227th CBC and has served as compiler 164 times.

Addenda

Add to last year's 1993 CBC one count week **Pacific Loon** at Clinton Lake and a count week **Common Yellowthroat** at Chicago Urban. Finally, supporting details were submitted for the state's first winter and CBC count week **Blue-gray Gnatcatchers** (2 at Carlyle Lake).

Editor's Note: This year's Christmas count period will run from 16 December 1995 - 2 January 1996. Please contact your compilers to find out how you can help participate in this nationally known scientific and social event.

BIRD FINDING GUIDE

Golden Plover drawing by Brian K. Willis.

Shorebirds at O'Hare Post Office Ponds

by Richard Biss

While mailing an urgent letter for my wife, Mary, on 17 May 1993 at the 24-hour O'Hare Post Office, I discovered a new shorebird location which I have called the O'Hare Post Office Ponds for obvious reasons. I heard a Semipalmated Plover and saw all the habitat there, but unfortunately it was midnight and I didn't have my binoculars, so I was unable to bird there until the next morning.

When I returned, I saw 114 shorebirds of nine species including one Wilson's Phalarope, 50 Least Sandpipers, 20 Semipalmated Plovers, and 15 Dunlins. An unusual interior record of the Sanderling was observed there at 6:30 a.m. on 28 May 1993. The species is a common spring and fall migrant along Lake Michigan and an occasional migrant elsewhere in the state (Bohlen 1989).

High counts for 1993 included 14 shorebird species on 12 Sept. and 170 shorebird individuals on 10 July. From May through October 1993, I saw 21 species of shorebirds at the O'Hare ponds.

Vol. 4, No. 3

In 1994, I observed three additional shorebird species, American Woodcock (25 April, 1 individual), Willet (25 April, 1 individual), and Western Sandpiper (7, 11, and 14 Sept., 1 individual each day) bringing the total to 24 (see table).

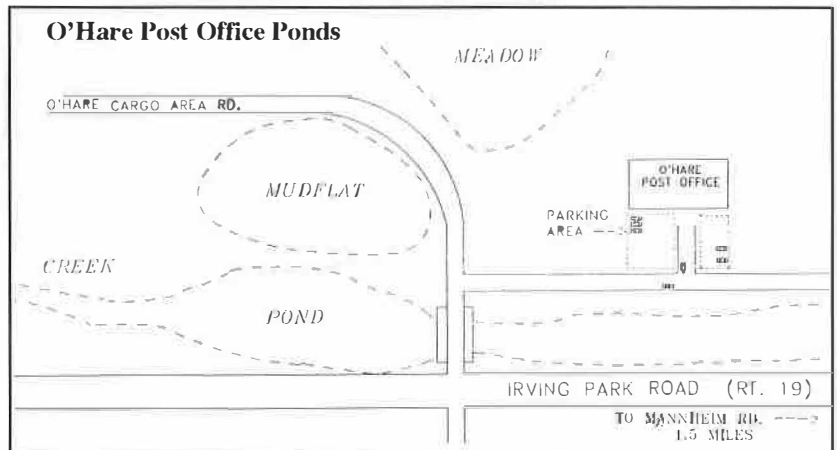

I saw a total of 83 species there in 1993 and 1994. Species that successfully nested in 1993 include Canada Goose (10 young), Mallard (50 young), Killdeer (8 young), Spotted Sandpiper (6 young), Barn Swallow, and Horned Lark (4 young and 4 adults in July).

The area collects runoff water from O'Hare Airport, so water levels can fluctuate tremendously from day to day. On many occasions, the ponds were almost completely dried

out on one day, and totally flooded the next day. One inch of rain easily produces a foot of water in this area. I don't know what the City of Chicago plans to do with these ponds. I saw surveyors there much of 1992. Hopefully this area will not be destroyed in the near future, considering how few shorebird locations there are in Chicagoland.

Birders can park next to the post office or along O'Hare Cargo Road (see accompanying map). The ponds may also be viewed from Irving Park Road, but the rapidly moving traffic makes observations difficult.

With the ongoing loss of so much shorebird habitat, I never considered it possible to find an area like this just eight minutes from my doorstep. It just shows how one can be blessed for doing an errand of mercy.

FEEDER STATION

Ovenbird chooses indoor atrium for winter feeding station

by Christine Williamson

January 1995, I was fairly startled to find a message from Richard Biss on my answering machine. Usually—it's the other way around. I ramble on about birds I've seen that he might or might not want to put on the Chicago Audubon Society's Rare Bird Alert. Biss only calls me if I've made a big mistake—like reporting a Brewer's Sparrow when I meant to say Brewer's Blackbird.

Biss' message said there was an Ovenbird (*Seiurus aurocapillus*) in the atrium at a Hyatt Hotel in Chicago. Biss had had intermittent reports of a bird stalking around under the tables in the atrium since November 1994. I work downtown and was a logical choice to check out this wintering warbler. Biss asked if I would go on location to check out the bird for the CAS and for *Meadowlark*.

The only binoculars I could find in the bottom of a desk drawer were a badly out-of-whack pair of Tascos, but I thought I'd probably at least be able to spot the bird. How many birds could there be in the Hyatt at 150 E. Wacker?

The Hyatt is split into two sections. I entered the west tower lobby and poked around in all the indoor planters looking for a tiny warbler. It was when I was on my knees peering at planter level through a bed of hostas that the first hotel staffer approached me.

"Have you lost something?"

"Uhhh... no. Not exactly. I'm looking for a bird," I replied.

"We don't have any birds in here."

"Well, I know you usually don't. But this winter, you do. It's an Ovenbird, a neotropical migrant. It should be in Central America right now, but somehow, it got trapped in the atrium and is supposed to be in here, poking around some bar tables."

The man looked relieved. "Oh, this isn't the atrium. That's over the walk-

way there in the east tower. If there was a bird in here, in the west tower, I'd know about it. Wouldn't I?"

I quickly moved away before he called security to escort me out as yet another loony in off the street. There was indeed a big, glassed atrium ahead of me and yes, there was a bar area with a player piano and a fountain and a patio restaurant.

A quick glance at the spider plants and grasses planted under ficus trees confirmed that a bird had been here. A tiny bird, judging by the size of the spoor, but he seemed to be getting enough food by the number of white-wash spots. It took me a little while, but I found the Ovenbird firmly planted in a ficus right above the player piano. He was hunkered down in shade and looked rather oily, with spiky head feathers.

Geoff Williamson and I returned to the Hyatt atrium at the end of January, camera in hand, to record the spa like winter quarters of this warbler. It took much longer to locate the Ovenbird this time. The bird was well hidden, deep in a ficus tree and immobile. Our watching, even at a distance, was definitely noticed by the bird, who was disturbed enough after a few minutes to fly across the atrium to the patio restaurant. In flight and in the bright winter sunshine flooding this glasshouse, the Ovenbird appeared a little drab, but healthy.

We tried to unobtrusively photograph the bird in the open roofed patios restaurant from over the top of the planter screens surrounding it. Eventually, Geoff just entered the patio and began snapping the bird. Several waitresses stopped by to tell us about their "pet" bird. The restaurant manager apparently kept tabs on the bird's movements all day. A diner dropped a hunk of whole wheat roll on the floor for the bird.

I smiled at the idea of these naive

diners. This bird was an insectivore, not a pigeon. He wouldn't come to bread. I was sure he was staying alive by eating roaches, spiders, ants, and planter pest bugs. And maybe fruit flies. Within 30 seconds, however, the Ovenbird was attacking the chunk of bread half his size with vigor. The tiny bill couldn't crack the crust, but managed well on the soft insides of the bread.

Someone more official from the hotel eventually turned up and took down all my details. I realized halfway through the recitation of my purpose in trespassing in this atrium and in writing down my phone number, that the manager might use this information when he later filed charges against me. He didn't kick us out, but I wasn't so sure he wouldn't kill the bird in the interests of public health.

We considered coming back in April to attempt to release the bird outside for spring migration. I suggested that we could do it early in the morning so we could set up the mist nets before any hotel guests were up and about. I could see "Publicity Stunt" and "Ten-Clock News coverage" shining from his eyes. He didn't call security.

As of March 1995, the Ovenbird was still domiciled at the Hyatt. It had a fountain to bathe in and drink from and probably a lot of roaches to eat, if my office a few blocks away is anything to judge from. It had friendly hotel staff and guests to feed him. And it had me secreting hunks of suet block and mealy worms inside the planters.

When I went to relocate the Ovenbird in late spring however it was nowhere to be found. I prefer to think it quietly died amid the flowerbeds or that it escaped through a window and found its way to more suitable habitat.

Seasonal Highlights -Winter 1994/1995

Barrow's Goldeneye at Winthrop Harbor, Lake County

On 31 January 1995 Paul Sweet discovered an adult male Barrow's Goldeneye (*Bucephala islandica*) at Winthrop Harbor, Lake County. Sweet observed the bird on Lake Michigan outside and south of the NorthPoint Marina harbor entrance near the rocky breakwaters. On 4 February Bob Erickson and Sherman Suter observed the bird inside the harbor mouth. The next day the goldeneye could not be relocated in Winthrop Harbor but Rick Siebert discovered the bird in Pleasant Prairie, Kenosha County, Wisconsin. Siebert observed the bird in a large goldeneye flock.

On 6 February I found the bird inside the NorthPoint Marina jetty with a dozen or more Common Goldeneyes (*B. clangula*). I noted its smaller bill than the Common Goldeneyes, the prominent loreal white crescent to and above the eye, the steep forehead, and the blackish to maroonish-purple head with a very sloped rear crown. I also noted the black back which came closer to the waterline than the other goldeneyes. The bird also had six white "squares" on each side of the back with two white oblong rectangles at the lower part of the black feathering closest to the white flanks. On 10 February, Scott Hickman and I relocated this bird at 106th Street and 1st Ave. in Pleasant Prairie just offshore Lake Michigan. To my knowledge Donald Dann of Highland Park was the last person to observe the bird early on 11 February at Pleasant Prairie.

Mlodinow (1984) listed only 11 dates (since 1955) for this rare winter visitor in the Chicago area. Since Mlodinow's cut-off date of 1982 for bird records included in his publication there have been several records of immatures and female Barrow's Goldeneyes which are very difficult to separate from Common Goldeneyes. This record is to my knowledge the first verifiable report of an adult male since 1978 in the Chicago area although there is a reliable observation of an adult male Barrow's Goldeneye at Waukegan's new south harbor mouth (Lake County) on 12 February 1992 (R. Gogh pers. comm.).

American Coot Migration in Sangamon County

I've never seen a flock of American Coots (*Fulica americana*) migrating and I don't suppose anyone else has either, since they are nocturnal migrants. They may occasionally fly short distances in daylight when chased by a motorboat, bearing down on the flock. But ordinarily, coots are seldom seen flying.

I usually watch Lake Springfield in the evening because most ducks, coots, grebes, loons, and gulls move toward the center of the lake for roosting, making them easier to count. They probably do this for protection from predators.

Several hundred coots were on Lake Springfield in Sangamon County, Illinois, around Marine Point on 2 April 1995. Many of the coots were moving out from the edge of the lake toward the center. It was past sunset, but there was an afterglow, providing enough light to see well. Some of the first stars had begun to appear and there was a sliver of moon. A light, southerly wind was blowing and it was clear, without cloud cover.

I saw a coot paddle along and fly into the air. I expected it to land again, but it climbed higher into the sky. I've never seen a coot flying that high before. I watched it flutter in a slow curve. It started toward the south into the wind, then arched around, in slow, up-spiraling circles. Finally, it was several hundred feet in the air, but still visible. It then straightened its course and flew north, out of sight.

I looked back to where the coot had started its flight and several more coots were performing the spiral-up routine. I watched several fly north. One or two dropped back to the water, but now, the sky over the lake was full of coots beginning nocturnal migration.

What amazed me was that the effort was an individual thing. It was not done as a flock. Most coots are observed sitting on the water in flocks during migration. However, what I observed was coots leaving individually, though many were in the air at once. I did not hear any vocalizations which would have kept the coots in contact. I speculate that once they reach a certain elevation, they may form a flock. I watched until about 8 p.m. The coots were still departing, but I could just barely discern them in the darkening sky.

Meadowlark

Gyrfalcon at Clinton Lake, De Witt County

The morning of 25 February 1995, I was observing the large collection of ducks and gulls gathered on the ice near the power station at Clinton Lake, De Witt County. This has always been a good spot to observe early migrant ducks and the rarer gulls. As usual, the adult Great Black-backed Gull that had been present since January was standing out on the ice.

At about 8:30 a.m., all of the ducks and gulls, including the Great Black-backed Gull, flushed as one. This usually meant that an eagle was flying overhead. However, I could not see any raptors and an eagle would have been very visible. At that point, I speculated about the possibility of a fast-moving Peregrine Falcon (*Falco peregrinus*).

Sure enough, a few minutes later, a large falcon came by. But this was no peregrine! I was immediately impressed by its size - larger than any of the gulls, except the great black-backed. Its size, heavy build, very broad-based, two-toned wings, and slight facial pattern identified this bird as a Gyrfalcon (*F. rusticolus*). The overall gray-brown color indicated that it was an immature. As I watched, it made amazingly rapid progress with seemingly little effort as it flew eastward past the power plant.

I notified the central Illinois birding community even though the bird appeared to be on the move. I thought perhaps it would at least be found somewhere else near Clinton Lake. While no one was able to find it the next day, Myrna Deaton discovered it on 4 March at the east end of the lake, near a major concentration of ducks, geese, and gulls.

On 5 March, Dick Sandburg, Kevin Richmond, and I observed the Gyrfalcon harassing a Great Horned Owl. The Gyrfalcon then flew out over the lake and returned to a perch. It offered us an opportunity to observe it for about 15 minutes at close range (less than 50 yards) through telescopes as it rested and preened before resuming its patrol of the lake.

My last view of the Gyrfalcon as I headed toward Farmer City half an hour later was of it chasing a flock of Canada Geese across a field. Although it forced the

Gyrfalcon drawing by Brian K. Willis.

geese to the ground, it showed no further interest, having proved its dominance.

Courtship in Subadult Bald Eagles in Mason County

Aerial courtship displays sometimes spectacular, are well known in the Bald Eagle (*Haliaeetus leucocephalus*), especially in late winter or early spring when migrating or at feeding areas (e.g., De Vore 1993, Ehrlich, Dobkin and Wheye 1988, Stokes and Stokes 1989). Aerial displays involving 20 to 30 individuals, predominantly subadults, were common in the central Illinois River valley in January and February 1995. Eagles in subadult plumage were numerous throughout winter in this area (Chautauqua NWR Christmas count had 41 immatures and 37 adults). Here I report an instance of courting behavior involving eagles in subadult plumage that was initiated on the ground in a harvested cornfield.

On 1 February 1995 at 9:45 a.m. while traveling west on a blacktop road near the entrance to the Forbes

Biological Station (Chautauqua NWR, Mason County), I noted four Bald Eagles in a conservation till cornfield on the south side of the road. One bird flew east as I stopped my pickup truck and reached for my field glasses. A subadult and a bird in full adult plumage were sitting about 5 meters apart on slightly elevated ground. The third eagle, another subadult, was on the ground about 30 meters east of the others. There was no snow cover on the ground, littered with corn stalks.

Using Cohen (1993) criteria, the subadults appeared to be third-year birds. Both had mottled bellies but not the dirty white head and tail and dull yellow beak of the classic fourth-year subadult. As I watched, the subadult on the ground scratched vigorously in the debris until it had gathered a small pile of leaves, all the while observed by the other adult. The subadult with the leaf load then flew low and parallel with the ground directly in front of and past the other birds rising to 15 to 20 meters above ground. At 30 to 40 meters elevation, both subadult birds rolled but did not appear to touch talons, though the bird initiating the behavior apparently unlocked one of its talons, as part of its leaf load was lost. Then, clutching the remaining load, it turned sharply north flying across the road followed closely by the second subadult. The two disappeared at the wooded area along Quiver Creek which flows toward Lake Chautauqua, 1 kilometer north of my observation point. Two minutes later the adult flew in a direction opposite the courting birds.

Having discovered an eagle nest several kilometers north on the refuge during the autumn of 1994, it was tempting to think these subadults might choose to nest in the area. Throughout February, adults were on the nest occasionally rearranging sticks, but only once did I observe a subadult at the nest site. On 18 March 1995, Barbara Frase observed an adult and an immature rearranging sticks at the nest. Shortly thereafter, high winds destroyed the nest, which was located in a cottonwood tree killed previously by flooding. It is most likely that the subadults I saw courting in February were practicing before moving north to contemporary eagle nesting habitat.

Glauco-winged Gull at Lake Springfield, Sangamon County

On 31 December 1994, as I was about to enter the cinder area just north of Lake Springfield, Sangamon County, I saw a large, buffy gull flying toward the flats. The gull had no black in the wing tips or tail. I drove into the cinder flats where the gull was standing with Herring (*Larus argentus*) and Ring-billed (*L. delawarensis*) Gulls. The gull in question was head and shoulders above the Ring-billed Gulls and larger than the Herring Gulls. The bird was in good light to the west at about 9:30 a.m. I put my Kowa scope on the bird at about 40X.

The gull had a large, thick, all-black bill. The plumage was buffy gray all over. It flew once, a short distance, showing little or no translucence in the wing tips, although the underwing appeared lighter. The wings were in fact the same color - grayish buff - all the way to the tip. This is the same impression I had when the gull flew into the flats. Gulls sometimes give this impression when they are in worn plumage (especially toward spring), but this gull did not appear to be in worn plumage.

I also knew that Glauco-winged Gulls (*L. hyperboreus*) had translucent wing tips and a two-tone bill and Thayer's Gulls (*L. thayeri*) had smaller bills and somewhat more dark areas in the wing tips and tails. The field marks on this gull eliminated Glauco-winged and Thayer's Gulls as possibilities. I was fairly certain that I was viewing an immature (first year) Glauco-winged Gull (*L. glaucescens*). I was familiar with this gull in coastal California, where the species fed on discarded minnows at a bait shop behind my apartment in Oceanside.

The gull was with hundreds of gulls and geese. While I was zeroing in on the fine points, I noticed a white bird with the geese. I scanned to the white bird - a Snow Goose - then quickly back to the gull. I couldn't find it! Thinking it had sat down, I scanned back and forth. Apparently, however, it had flown just as I moved to the Snow Goose. I checked the rest of Lake Springfield

Meadowlark

without success. I missed checking eye and leg color, although my impression was that the eye was dark, as it is in most immature gulls.

This sighting represents the second accepted record by the Illinois Ornithological Records Committee of five reported Glaucous-winged Gulls in Illinois. The state's first confirmed record was found at Lake Calumet in December 1992. See *Meadowlark*: 4: 47, "First Confirmed Illinois Record of the Glaucous-winged Gull" by David B. Johnson, Laurence C. Binford, Ph.D., Alan Stokic, and Walter Marcisz.

Snowy Owl in central Illinois, Vermilion County

On New Year's Eve 1994, a fellow Vermilion County Audubonite, Thelbert Falconer, called to report that there had been a Snowy Owl (*Nyctea scandiaca*) in the Rossville area for the past several days. I could think of no better way to celebrate New Year's Day than tracking this northern species. Two anxious Audubon

In Memory of Todd Fink

Todd Fink died unexpectedly on July 11, 1995, after a short illness. He was 36 years old, a natural heritage biologist for the Illinois Department of Conservation (now the Illinois Department of Natural Resources), and the best known birder in southern Illinois. He led field trips for the Illinois Ornithological Society, Illinois Audubon Society, The Nature Conservancy, and many local organizations. He wrote articles for *Meadowlark*, *Illinois Highlights*, *Illinois Audubon*, and *Bird Watcher's Digest*. Well-known as a nature photographer, he had photo credits in several books and periodicals including *The Nature of Illinois*. He was a former IOS director and editorial advisor for *Meadowlark* at the time of his death.

Many southern Illinois birders joined the ranks as a result of Todd's influence. He showed us the best spots at the best times, often resulting in the best birds. During the spring warbler migration, we were impressed by his ability to identify birds not only by song, but also by call notes. While we were focusing on a warbler's song, he was noting a scolding vireo and three kinds of frogs. His mind was quick to process the rarer voice in the dawn chorus, the distant singer we'd all eventually hear, but Todd usually heard first.

He was the only person I met who carried binoculars while he jogged. On one April run he discovered two Henslow's Sparrows. Once he spotted a Short-eared Owl foraging at dusk. Another time he found a family of Pine Warblers overwintering in a pine grove on his jogging route. If Todd didn't have the earliest record or the

members scanned fence posts, power line poles, swells, and swales of empty farm fields on both sides of the road until I finally saw the Snowy Owl as it flew from one weed patch to another and pounced on prey.

Two days later, the Snowy Owl was observed in the same area, but near a barn. At intervals, he moved to grassy patches near soil drainage structures. He was most cautious and stayed barely within binocular range. James O. Smith's spotting scope revealed an almost pure white bird with large yellow eye and perhaps a gray feather or two. While we were watching, the owl suddenly rose from the ground and flew directly toward us, then made a right angled turn to a perch on a pole on the next road, just out of camera and binocular range. The following day, the owl was hunting in a cornfield near a grass waterway, a mile or so east of the original sighting point.

Three days passed and snow covered Vermilion County. We decided to check for the bird despite the difficulty of seeing it in the snow. We found it perched on a fat pipe at a gas installation in an empty field. Before this sighting, the most recent confirmed Snowy Owl in central Illinois was January 1990 in Catlin, Illinois, where it remained until April.

Doris Westfall,
303 Northland, Danville, IL 61832

highest count, he'd likely have the latest departure date for many woodland species.

A few years ago when H. David Bohlen's "Birds of Illinois" was published, I began collecting autographs of birders whose records were published in the book. I asked them to sign next to their best bird. But Todd never autographed my book because he couldn't choose his best bird from among his 65 records that appeared in the book. The Cinnamon Teal, Tricolored Heron, or Ruff he found at Rend Lake would have been worthy, but Todd didn't find them until 1994. The White Ibis foraging with a Willet and American Avocet made the flood of 1993 memorable. But as remarkable as those sightings were for Todd, none of those were his best birds either. The Curve-billed Thrasher we found while scouting for the 1992 Rend Lake CBC earned that title. It was a first state record and a lifer for Todd and me.

Todd greeted a new year eagerly even though he despised winter. To combat the winter blues he invented a game to see if we could find 100 species in Illinois during January. We could. And January became shorter and more exciting.

Todd's Illinois life list included 340 species and in 1994 he joined the very few who have seen more than 300 species in a single year. On May 12, 1995, Todd set a new state warbler record. He saw 33 species in one day.

Todd was a scientist, lister, recruiter, and friend. We will miss him.

Judy K. DeNeal

Field Notes

Drawing of Tufted Titmouse by Denis Kania.

1994-95 WINTER

by Robert Danley

This was the nation's second warmest winter in 100 years and milder temperatures in Illinois made for some interesting birding. State temperatures in December were 6 to 7 degrees Fahrenheit above normal. January was 2 degrees above normal, while February readings were more seasonal, about .9 degree above normal. Precipitation was .6 inch below normal for December as well as February. January had above normal amounts of precipitation (1.8 inches). Heavy snowfall amounts were recorded in January; 22 inches fell on Moline, for example.

The warmer conditions didn't inhibit Northern Shrikes from a major (perhaps the state's largest) invasion. Lingering shorebirds included both yellowlegs, Sanderling, two peep species, Ruff, and Long-billed Dowitcher. Thirty-four waterfowl species were observed, representing the largest number detected in a winter. Highlights included a male King Eider and breeding males of Harlequin Duck and Barrow's Goldeneye.

Hawk numbers were typical. Cold fronts in early February in northern Illinois may have induced brief appearances by Gyrfalcon and Prairie Falcon. Gull numbers were below normal although a wider variety of species than usual was observed.

All expected owl species were recorded, but in low numbers. Only two Snowy Owls were observed. Red-breasted Nuthatch, Cedar Waxwing, and the winter finches were either absent or found in very low numbers. Many passerines lingered past usual departure dates. Wintering longspurs and Snow Buntings were observed in concentrated pockets at scattered locations.

A number in parentheses () indicates the number of birds observed at a particular location or on a particular date. No number signifies single birds.

Aerial surveys of waterfowl were completed by Michelle Georgi on 8 and 13 Dec. and 8 Jan. and by Richard Whitton on 9 and 17 Feb. These should be considered rough population estimates. Also, the Union Co. totals from 22 Dec. were from the Union County Christmas Bird Count and represent an index of species population over a region.

Underlined, bolded, and capitalized species are those records that are of special note due to their rarity in the Illinois winter season. Counts, dates, and locations that are underlined and bolded represent a very unusual site or numbers of that species for a particular region. Regions are defined as northern, central, and southern Illinois.

Gyr Falcon

25 Feb.- 4 Mar. (**dark phase**), **Clin.L** (*RC, *MD) See seasonal highlights.

Prairie Falcon

25 Jan., Clinton Co (*MSc).

Gray Partridge

17 Dec. (2), Winnebago Co (DW).

Ring-necked Pheasant

MC: 28, Fermi, 17 Dec. (DK, PK); 15, Pratt Wayne Woods F.P. (DuPage Co), 17 Dec. (JSu); 13, Sangamon Co, 3 Jan. (DB).

Wild Turkey

MC: 42, SRSF, 29 Dec. (KR). Others: 22 Dec. (9), Union Co (VK, m.ob.); 12 Feb. (2), Seneca (La Salle Co) (JMc, CMc); 26 Feb. (4), Jefferson Co (KM); 27 Feb. (12), Sang. L (DB).

Northern Bobwhite

MC: 20, HL, 9 Dec. (KM); 15, Sangamon Co, 1 Jan. (DB).

Virginia Rail

9 Dec. (window kill), Urbana (fide EC); 26 Dec., Joliet (usual location) (JM).

COMMON MOORHEN

31 Dec., LCal (*MBa). 3rd IL record, 2nd in last two years.

American Coot

MC: **1,000**, Braidwood, 29 Dec. (JM); **950**, HL, 11 Dec. (KM); 205, GLNTC, 30 Dec. (LB); 185, Rend L., 17 Dec. (TF); 150, Spfld, 12 Dec. (DB).

Sandhill Crane

MC: **40**, Fermi, 11 Dec. (fide JFz). Others: **1 Jan., Clinton Co** (DKa); **2 Jan., JP** (*PC); **25 Jan. & 23 Feb., Rend L.** (LS); **wintered, CONWR** (fide BD).

Killdeer

MC: 30, Bond Co, 10 Dec. (KM); 26, Sang. L., 10 Dec. (DB); 12, Pulaski Co, 21 Dec. (TF).

GREATER YELLOWLEGS

17 Dec. (3), Rend L (MSc); 29 Dec. (4), Rend L. (LS). IL's first winter records.

LESSER YELLOWLEGS

8 Dec., Sand L (Mason Co) (KR, LA); 17 Dec. (3), Rend L (MSe); 29 Dec. (3), Rend L (LS). IL's first winter records.

SANDERLING

24 Nov., Wauk (fide EW); 2-6 Dec & 9-12 Dec., Chi (JPu); 20-21 Dec., Evanston (EW) - all 3 records are of same bird with an injured leg. IL's 4th winter record.

WESTERN SANDPIPER

24 Nov.-11 Dec., Sand L (Mason Co) (KR); 27 Dec., LChau (KR). IL's first winter record.

Least Sandpiper

8 Dec. (3) & 12 Dec. (3) & 22 Dec. (2), Sand L (Mason Co) (KR); 17 Dec. (15) & 29 Dec. (10), Rend L (MSe & LS)).

PECTORAL SANDPIPER

23 Dec., Rend L (LS). IL's third winter record.

Dunlin

8-11 Dec. (6), Sand L (Mason Co) (KR); 27 Dec. (2), LChau (KR); 1 Jan., Rend L (LS).

RUFF

23 Nov.- 12 Dec. (reeve), Sand L (Mason Co) (KR et al). IL's first winter record.

LONG-BILLED

DOWITCHER

24 Nov.- 11 Dec. (2), Sand L (Mason Co) (KR, m.ob.). IL's first winter record.

Common Snipe

MC: 14, UCCA, 8 Jan. (TF); 11, Glenview (Air Station), 26 Dec. (L.C). Others: 15 Jan. (2), Pratt Wayne Woods F.P. (Du Page Co) (m.ob.); a few wintered, Sangamon Co (DB).

Little Gull

30 Oct.- 4 Dec. (imm.), Clin.L (AS,*RC).

Bonaparte's Gull

MC: 1,000, La Salle I., 3 Dec. (JMc, CMc); 500, Spfld, 1 Dec. (DB); 400, L Decatur (Macon Co), 10 Dec. (MD); 175, Carl. L, 10 Dec. (KM); 53, Chi, 11 Dec. (WM). Others: 24 Dec. (11), IBSP (AS); 16 Jan. (2), JP (PC).

Mew Gull

23 Dec., Evanston (*CP).

Ring-billed Gull

MC: 10,100, Carl. L, 23 Jan. (KM); 10,000, L Decatur (Macon Co), 10 Dec. (MD); 8,000, Spfld, 5 Dec. (DB); 2,000, Greene Valley F.P. (Du Page Co), 17 Dec. (WM); 820, Evanston/Wilmette (Cook Co), 26 Dec. (EW, IE).

California Gull

25 Feb., Clin.L (*RC).

Herring Gull

MC: 4,500, LCal, 31 Dec. (WM); 1,000, Heidecke L (Grundy Co), 2 Jan. (JM); 300, HL, 9 Jan. (KM); 288, JP, 26 Feb. (PC); 50, Spfld, 3 Jan. (DB).

Thayer's Gull

MC: 7, Lake Co lakefront, 1 Jan. (LB). Others: 15 Dec. (ad.), Powerton L (Tazewell Co) (KR); 19 Dec. (ad.), Carl. L (KR); 24 Dec. (ad., imm.), HL (DKa, ASp); 26 Dec. (ad.), Techy (Cook Co) (LB); 1 Jan. (ad.), Spfld (DB); 2 Jan., LChau & Pekin (RC); 4 Jan. (ad.), Peoria Lock & Dam (KR); 5 Jan. (3), LCal (JL); 14-16 Jan. (3-1st winter, subadult, ad.), Clin.L (RC, MD); 16 Jan., Du Page Co (EW, JE); 3 Feb. (ad.), Spfld (DB); 18 Feb. (2 ad.), Alton (DKa, ASp); 18 Feb. (1st winter), Wauk (PSw).

Iceland Gull

5 Jan. (Kumliens), LCal (JL); 21 Jan., LCal (RC); 12 Feb. (1st winter), CONWR (BD).

Sanderling, 20 Dec. 1994, Evanston boat launch, Cook County. Bird was present since November 1994. Leg was injured. This is a late northern Illinois sighting for this species. Photo by Eric Walters.

White-breasted Nuthatch

MC: 178, Union Co, 22 Dec. (VK, m.ob.).

Brown Creeper

MC: 20, Union Co, 22 Dec. (VK, m.ob.); 11, Glenview, 26 Dec. (JSu). Others: 4, Spfld, 30 Dec. (DB); 2, wintered, JP (PC).

Carolina Wren

MC: 250, Union Co, 22 Dec. (VK, m.ob.). Others: 9, Spfld, 18 Dec. (DB); 2, Starved Rock S.P. (La Salle Co), 2 Jan. (CMc, JMc); 2, Evanston, 24 Nov.-29 Jan. (EW); DPCA, 2 Jan. (JM); Illini S.P. (La Salle Co), 18 Feb. (DS).

House Wren

20 Dec., HLCA (fide VK).

Winter Wren

MC: 34, Union Co, 22 Dec. (VK, m.ob.). Others: 5 Dec., Vermilion Co (JS); 17 Dec., Fabyan Woods (Kane Co) (AS); 18 Dec. (2), Spfld (DB); 26 Dec., Lockport (JM); 1 Jan., MacArthur Woods (Lake Co) (AS); 1 Jan. (2), GLNTC (LB); 6 Feb., Zion (Lake Co) (PSw).

Golden-crowned Kinglet

MC: 110, Union Co, 22 Dec. (VK, m.ob.). Others: 5, Spfld, 3 Dec. (DB).

Ruby-crowned Kinglet

MC: 32, Union Co, 22 Dec. (VK, m.ob.). Others: 14 Dec., Spfld (DB); 16 Jan., Allerton Park (Piatt Co) (MD); wintered, Rockton (Winnebago Co) (ABr, BG).

Eastern Bluebird

MC: 199, Union Co, 22 Dec. (VK, m.ob.). Others: 9, Spfld, 3 Dec. (DB); 3, M. Arb, wintered (m.ob.).

Hermit Thrush

MC: 9, Union Co, 22 Dec. (VK, m.ob.). Others: 11 Dec., Decatur (Macon Co) (MD); 26 Dec., Wilmette (m.ob.); 3 Jan., Johnson

Co (TF); 8 Jan., Skokie Lagoons (Cook Co) (AS).

American Robin

MC: 2,400, Glenview, 26 Dec. (JSu) but only 845 there on 16 Jan. (EW,JE). Others: 153, Evanston, 23 Dec. (EW); 100, Vermilion Co, 28 Feb. (JS); 55, Spfld, 28 Feb. (DB).

Gray Catbird

3 Dec., Urbana (RC); 10 Dec., Clin.L (MD); 11 Dec., Spfld (DB); 31 Dec., Rockford (DW).

Mockingbird

MC: 33, HLCA, 20 Dec. (VK, m.ob.). Others: 4 Dec. (4), Spfld (DB); 2 Jan. (2), Braidwood & GLPSP (JM); 2 wintered, O'Fallon (St Clair Co) (KM).

Brown Thrasher

MC: 13, HLCA, 20 Dec. (VK, m.ob.). Others: 2 wintered, Spfld (DB); wintered, Glencoe (LB).

American Pipit

MC: 16, Carl L (Clinton Co), 11 Dec. (DKa); 5, UCCA, 26 Feb. (KM). Others: 8 Dec., Powerton L (Tazewell Co) (KR, LA); 17+ Dec., Urbana (RC); 20 Dec., HLCA (MD); 21 Dec., Pulaski Co (TF).

Cedar Waxwing

MC: 500+, Rockford, 12 Feb. (DW); 182, Rockford, 17 Dec. (DW). Others: 30, Franklin Co, 2 Jan. (LS); 25, Spfld, 18 Dec. (DB); 13, Lake Forest (Lake Co), 1 Jan. (JSu); 12, Boone Co, 26 Dec. (AB); absent mostly from n.e. Illinois (EW).

Northern Shrike

MAJOR INVASION—10 Dec., La Salle Co (DS); 11-16 Dec., Fermi (JSu); 12 Dec., Lee Co (CMe, JMc); 17 Dec. (4), Winnebago Co (DW); 18 Dec., Clin.L (MD); 27 Dec., Bureau Co (JMc, CMe); 30 Dec., Kane Co (fide JFz); 1 Jan., Kendall Co (DS); 1 Jan., Gages L (Lake Co) (DJ); 2 Jan., GLPSP (JM); 7-8 Jan., Fulton Co (KM); 15 Jan.- 12 Feb., Homer L (Champaign Co) (RC, EC); 16 Jan., Clin.L (RC); 16 Jan., Orland Hills (Cook Co) (EW, JE); 16 Jan., Cisco (Piatt Co) (MD); 21 Jan., sw. Cook Co (AS); 21 Jan., Volo Bog (Lake Co) (PSw); 29 Jan., La Salle Co (JMc, CMe); 29 Jan., Crabtree N.C. (Cook Co) (AS); mid Dec.-27 Jan., Techny (Cook Co) (LB, EW, m.ob.); Dec.-Jan. (2), IBSP (AS); Dec.-Jan. (4), from 3 locations Boone Co (AB). Seemed to disappear in Feb.

Loggerhead Shrike

MC: 10, HLCA, 20 Dec. (VK, m.ob.); 5, Bond Co, 18 Dec. (KM); Mason Co, 4 & 14 Dec. (KR).

European Starling

MC: 21,150, Glenview (JSu, LB) - nearly gone by mid-Jan.; 8,500, LCal, 26 Dec. (WM); 1,300, HLCA, 20 Dec. (VK, m.ob.).

Orange-crowned Warbler

15 Dec., Spfld (DB); 21 Dec., Johnson Co (TF).

NASHVILLE WARBLER

1 Jan. (ad. male), GLNTC (*LB, *RB). IL's 9th winter record.

NORTHERN PARULA

20 Dec., Johnson Co (**TF). IL's 3rd winter record.

Yellow-rumped Warbler

MC: 178, Union Co, 22 Dec. (VK, m.ob.). Others: 11, Northbrook (Cook Co), 26 Dec. (m.ob.); 6, Spfld, 29 Dec. (DB); 5, Chi, 18 Dec. (JSa); 2, De Kalb Co, 31 Jan. (DS).

Pine Warbler

wintered (2+), CONWR (BD, KM, TF).

Common Yellowthroat

20 Dec. (2 males), HLCA (DB); 22 Dec. (2), Union Co (VK, DB).

Northern Cardinal

MC: 512, HLCA, 20 Dec. (VK, m.ob.). Others: 69, Spfld, 3 Jan. (DB).

Indigo Bunting

20 Dec. (2), HLCA (*DB).

Rufous-sided Towhee

MC: 26, HLCA, 20 Dec. (VK, m.ob.). Others: 6 Dec. (2), Boone Co (AB); 17 Dec., Rockton (Winnebago Co) (DW); 21 Dec. (2), Johnson Co (TF). "*Spotted form*" - 10 Nov.-29 Dec., SRSF (KR); 7 Feb., Spfld (DB).

American Tree Sparrow

MC: 319, Du Page Co, 17 Dec. (JSu); 300, LCal, 31 Dec. (WM); 135, Will Co, 26 Dec. (JM); 115, Spfld, 9 Feb. (DB).

Chipping Sparrow

22 Dec., Union Co (*DB); 23 Dec., **Mason Co** (*DB).

Field Sparrow

MC: 108, HLCA, 20 Dec. (VK, m.ob.). Others: 17 Dec. (3), Winnebago Co (DW); 2 Jan., GLPSP (JM); 20 Feb. (5), Spfld (DB); 26 Feb. (6), Pulaski Co (TF).

Vesper Sparrow

20 Dec., HLCA (*DJ).

Savannah Sparrow

MC: 41, HLCA, 20 Dec. (VK, m.ob.); 10, Baldwin L, 9 Jan. (KM); 10, Franklin Co, 24 Jan. (LS); 7, Decatur (Macon Co), 7 Jan. (MD); 7 wintered, Sangamon Co (DB); 6, Pulaski Co, 21 Dec. (TF). Others: 17 Dec., **nw. DuPage Co** (DJ, JSu); 24 Dec., HL (DKa); 7 Jan., Urbana (RC); 15 Jan., La Salle Co (CMe, JMc); **29 Jan., GLPSP** (JSa, BDe).

Le Conte's Sparrow

6 Dec., **Powerton L** (Tazewell Co) (KR); 20 Dec. (3), HLCA (VK, m.ob.); 24 Dec., HL (DKa); 8 Jan. (2), Johnson Co (TF); 24 Jan. (2), Franklin Co (LS).

Fox Sparrow

MC: 96, HLCA, 20 Dec. (VK, m.ob.); 30+, Jackson Co, 20 Feb. (DKa); 12, Sangamon Co, 13 Dec. (DB); 12, Pulaski Co, 21 Dec. (TF). Others: 18 Dec., Chi (JSa); 7 Jan., Sand Ridge N.C. (Cook Co) (AS, JSa); 16 Jan., Zion (PSw); 23 Jan., Clinton Co (KM); 24 Jan. (4), Franklin Co (LS); 29 Jan., Crabtree N.C. (Cook Co) (AS); 5 Feb., Mahomet (RC, GL).

Song Sparrow

MC: 894, Union Co, 22 Dec. (VK, m.ob.). Others: 1 Dec. (20), Spfld (DB); 18 Jan., JP (PC).

Lincoln's Sparrow

17 Dec., **Pratt Wayne Woods** (Du Page Co) (*JSu); 20 Dec., HLCA (MD); 22 Dec. (2), Union Co (VK, m.ob.); 12 Feb., **Middlefork F.P.** (Champaign Co) (RC) - same bird as last year?.

Swamp Sparrow

MC: 654, Union Co, 22 Dec. (VK, m.ob.); 25, Middlefork F.P. (Champaign Co), 12 Feb. (RC); 14, Spfld, 1 Dec. (DB).

White-throated Sparrow

MC: 896, HLCA, 20 Dec. (VK, m.ob.); 13, Spfld, 13 Dec. (DB).

White-crowned Sparrow

MC: 77, HLCA, 20 Dec. (VK, m.ob.); 15, GLPSP, 2 Jan. (JM); 12, Urbana, 17 Dec. (RC); 8, Spfld, 7 Feb. (DB); 7, LCal, 31 Dec. (WM); 4, Techny (Cook Co), 26 Dec. (LB).

The adult (center) and two immature White-crowned Sparrows tallied 2 Jan. 1995 on the Morris-Wilmington Christmas Bird Count at Goose Lake Prairie State Park, Grundy County. Photo by Joe B. Milosevich.

Harris' Sparrow
wintered. **HL**. (JZ. DKa. KM).

Dark-eyed Junco

SUBMISSION INFORMATION

✔ We welcome manuscripts, photographs, and illustrations for possible publication in *Meadowlark*.

✔ Article topics include unusual bird sightings and nesting accounts, technical papers on bird research, and other articles such as bird finding guides and field identification tips. Joy of birding articles will be considered.

✔ Manuscripts should be typewritten or computer-generated, double spaced and on only one side of numbered pages. Please send two copies of your manuscript and make sure you keep another for yourself.

✔ If you are able, submit a computer disc in ascii file or for Word Perfect 5.1.

✔ Include name, address, and day and night time phone numbers. Other pertinent information about your qualifications and background is also helpful.

✔ We prefer clear black and white or color print photographs. Color slides may also be acceptable.

✔ We reserve the right to review and edit articles according to style, grammar, accuracy, and readability.

☒ Send articles, photographs, and inquiries to:

Sheryl De Vore, Chief Editor
967 Braeburn
Mundelein, IL 60060.

☒ Pen and ink drawings are also accepted. Contact:

Denis Kania
1536 Preston Road
Naperville, IL 60563.

SUBSCRIPTION INFORMATION

Members of the Illinois Ornithological Society receive *Meadowlark*, the quarterly journal, plus *Wings Over The Prairie*, the IOS newsletter. Members are also invited to special field trips, the annual meeting, and other IOS functions.

To join or send a gift subscription, send your name or that of the gift recipient, address, and telephone number along with fee to:

IOS
P.O. Box 1971
Evanston, IL 60204-1971.

Back issues of Volume 1, 2, 3 and 4 are still available for \$5 each.

Fees:

Individual \$20
Family \$30
Full-time student \$10
Contributor \$50 - \$99
Supporter \$100 - \$499
Sponsor \$500

EAST MEETS WEST

The western "spotted" and eastern races of the Rufous-sided Towhee (Pipilo erythrophthalmus) were seen northwest of Springfield, Illinois, the winter of 1995. Dennis Oehmke took these photos of two males on 9 Feb. 1995.

Notice the spotted feathers and two white wing bars of the left-facing photograph indicating western race and the lack of spots on the right-facing photograph of the eastern race. Western race (P. e. arcticus) normally occurs in the northwest United States and occasionally in Illinois. A photographed western race Rufous-sided Towhee was seen 8 May 1993 in Decatur, Illinois (Bohlen, H.D. Birds of Illinois. 1989. Indiana University Press.)
